Joel Shajan

Game Developer — Gameplay Programming · Technical Animation · World Building

Bangalore, India · joelshajankuttu@gmail.com · github.com/Roomixer

PROFILE

Entry-level game developer who builds complete gameplay systems in **Unreal Engine 5 (C++)** and Unity (C#). Most recently built a souls-like action RPG solo — melee combat, enemy AI, a boss encounter, montage-driven animation and the game world — handling programming, technical animation and level art end to end. Comfortable across the full cycle from prototype to testing and polish, and eager to contribute to gameplay features in a professional team.

PROJECTS

CoopSoulsGame — Co-op Souls-like Action RPG

Unreal Engine 5 · C++

Solo project · github.com/Roomixer/Souls-game-UE-5.7

- Built a full melee combat system in C++: light, heavy and hold-release charge attacks, cross-cancel combos, parry windows, stamina-based guarding, i-frame dodge roll, lock-on camera and backstab executions.
- Wrote enemy AI on a custom `AIController` with a timer-based state machine (patrol / chase / attack) and a poise system that triggers stagger, stumble and backstab vulnerability.
- Designed a scalable class hierarchy (`ACoopEnemy → ACoopBossEnemy`) for a 2.5×-scale boss whose weapon uses per-tick socket-to-socket sweep collision.
- Drove combat through animation montages layered over blend-space locomotion, with custom C++ anim notifies for hit windows, parries and combat events; retargeted animations with IK Retargeter.
- Built split-screen co-op UI — per-player HUD and viewport-isolated enemy health bars — for two playable characters (sword warrior and archer).
- Created the world: a connected path of forest, camp, castle ravine and boss arena, with lighting and set dressing.

Monkey Jump — 3D Parkour Platformer

Unreal Engine · Blender

- Designed 5 levels, each built around its own hazard: falling rocks, collapsing platforms, fire projectiles and hidden walls.
- Modelled custom assets in Blender and created custom materials in Unreal.

Space Shooter 2D

Unity · C#

- Built player shooting, power-ups (double shot, triple shot, shield), enemies that fire back, health and scoring systems, and audio.

TECHNICAL SKILLS

Languages	C++, C#, Blueprint, Java, Python, HTML
Engines & Tools	Unreal Engine 5, Unity, Blender, Visual Studio 2022, Git / GitHub
Gameplay	Combat systems, enemy AI & state machines, NavMesh, collision & hit detection, input, UI / HUD, split-screen
Animation	Animation Blueprints, montages, blend spaces, anim notifies, IK Retargeter
Art & Design	Level design, 3D modelling, materials, lighting, game design documents
Practices	Debugging, logging, profiling basics, playtesting, bug reporting, iterative development

EXPERIENCE

Customer Relations Associate — Mphasis Ltd

Dec 2024 – Apr 2025

Client: Capital One

- Resolved sensitive customer cases, including fraud and scams, bereavement and financial hardship, under time pressure and with empathy.
- Built strong communication and problem-solving skills in a high-volume, process-driven team.

EDUCATION

Bachelor of Computer Applications — Jain (Deemed-to-be University), Bangalore 2021 – 2024

Higher Secondary — Indian School, Bahrain 2019 – 2021
